TREX® ROD RAIL HORIZONTAL RAILING

Installation Instructions

HOW TO INSTALL ROD RAIL STANDARD RAILING TREX SIGNATURE®

1. Prepare a solid work surface area (plywood, deck surface, etc.).

How to Measure Bottom and Top Railings (When Required)

2. **For Full Span Post to Post Applications** – only top rail will need to be cut.
3. **For Full Span Crossover to Crossover post Applications** – no rails have to be cut, HOWEVER the location of the HZ Template on the top rail will need to be adjusted in 3/4" on each side of top rail to allow for proper placement of vertical supports.

4. Measure distance between posts (X), and subtract 1/2" for bracket clearance.

If installing crossover post configurations adjust top rail length: $X + 3/4"$ if using one crossover post, or $X + 1-1/2"$ if using two crossover posts.

If using swivel brackets, measure distance between brackets and cut railings to this distance.

Cutting Railings and Covers

5. Cut both bottom and top rail to length as determined above.

6. Mark and cut bottom rail cover the same length as bottom rail.

7. Mark and cut top rail cover same length as top rail for all top rail configurations.

Locating Vertical Holes on Bottom and Top Rails

8. Place HZ template at end of top and bottom rails. Pre-drill pilot holes (using a 7/64" bit or small punch) at locations. Ensure that template is oriented correctly before drilling holes.

NOTES:

- » Template is labeled for the type of bracket used.
- » Pilot holes will be drilled out larger in a later step.
- » For Compound Swivel Brackets, set the rail in the bracket and mark 3.75" from the post.

HOW TO INSTALL ROD RAIL STANDARD RAILING/CONTINUED TREX SIGNATURE®

6' Rail Spans or Shorter

9a. Measure the distance between the vertical end holes on **both top and bottom rails**. Mark the center.

IMPORTANT NOTE: *DO NOT* mark the line across the entire width of the bottom rail, as it will be visible after install. Maximum recommended line width is 1".

Over 6' Rail Spans

9b. Measure the distance between the vertical end holes on **both top and bottom rails**. Divide the distance into thirds and make two marks on top and bottom rails.

NOTE: Maximum unsupported rod span is 32.25

Locating and Drilling Midspan Holes

10. Using the slot on the HZ template, locate marked line and drill two 7/64" pilot holes (or mark with a punch).

NOTE: Pilot holes will be drilled out larger in next step.

11. Using pilot holes (or marks), drill 1/4" holes for all vertical supports in both top and bottom rails.

NOTE: Clean any burrs from edges of holes to ensure good fit on both sides.

Cutting Rods to Length (When Required)

12. Measure the distance between the end (outer) holes (X") on top or bottom rail and add 3/8" to this measurement.

NOTE: If installed at exact spans, rods do not have to be cut.

13. Cut rods to the length measured in previous step.

Vertical and Rod Assembly

14. Insert anti-rattle strips into the vertical supports.

NOTE: There are two anti-rattle strips for each support which can only be inserted in one side.
